## Product Details

- Ideal for Imaging Applications
- Minimize Aberrations Including Spherical and Coma
- Precision Fused Silica Substrate

TECHSPEC® UV Fused Silica Double-Convex (DCX) Lenses, also referred to as bi-convex lenses, have two positive, symmetrical faces with equal radii on both sides. These lenses are generally recommended for finite imaging applications with a conjugate ratio (ratio between object distance and image distance) between 0.2 and 5. At a conjugate ratio of 1, aberrations such as spherical aberration, chromatic aberration, coma, and distortion are minimized or canceled due to the symmetric lens design. TECHSPEC® UV Fused Silica Double-Convex (DCX) Lenses have a precision fused silica substrate. These lenses are available uncoated or with UV-AR, UV-VIS, VIS-EXT, VIS-NIR, VIS 0°, NIR I, or NIR II coatings.

UV FS Transmission Curve

FUSED SILICA	
<h3>Uncoated Fused Silica Typical Transmission</h3> <p>The graph shows the typical transmission of a 3mm thick uncoated fused silica window. The y-axis is Transmittance (T) in percent, ranging from 70 to 100. The x-axis is Wavelength in nanometers, ranging from 200 to 2200. The transmission is consistently high, staying above 90% across the entire range, with a small dip around 1400nm.</p>	<p>Typical transmission of a 3mm thick, uncoated fused silica window across the UV - NIR spectra.</p> <p><a href="#">Click Here to Download Data</a></p>
<h3>Fused Silica with MgF<sub>2</sub> Coating Typical Transmission</h3> <p>The graph shows the typical transmission of a 3mm thick fused silica window with an MgF<sub>2</sub> coating. The y-axis is Transmittance (T) in percent, ranging from 70 to 100. The x-axis is Wavelength in nanometers, ranging from 200 to 2200. A blue shaded region from approximately 400nm to 700nm indicates the coating design wavelength range.
