Product Details

- Cylinder Lenses Ideal for 1 Dimensional Laser Beam Convergence
- Circular and Rectangular Form Factors
- Multiple Coating Options Available

TECHSPEC® Illumination Grade PCV Cylinder Lenses are commonly used to turn a collimated laser source into a line generator. These PCV Cylinder Lenses and **TECHSPEC Illumination Grade PCX Cylinder Lenses** can be used together for beam expander applications.

The thin lens approximation for the length of a line generated by a negative cylinder lens is: L = 2 * (r_0/f) * (z + f) where L is the line length, r_0 is half the beam diameter, z is the projection distance, and -f is the focal length of the lens.
