SPECIFICATIONS

General

Microscope Objective

Type:

Style:

Finite Conjugate

Manufacturer: Edmund Optics®	
Note: Entrance Pupil Position specification is measured in mm from flange	
Physical & Mechanical Properties	
Field of View (mm):	
Diameter of Small Mirror (mm): 8.8	
Aperture Diameter (mm): 8.5	
Hange Distance (mm):	
Optical Properties	
Entrance Pupil Position (mm): 40.0	
Horizontal Field of View, 1/2" Sensor: 0.43mm	
Horizontal Field of View, 2/3" Sensor: 0.59mm	
Focal Length FL (mm): 12.97	
Coating: DUV Enhanced Aluminum (150-11000nm)	
Magnification: 15X	
Numerical Aperture NA:	
Obscuration (%):	
Transmitted Wavefront, RMS: V14	
Working Distance (mm): 23.75	
Coating Specification: R _{avg} >83% @ 150 - 1000nm (typical) R _{avg} >94% @ 1000 - 11000nm (typical)	
Wavelength Range (nm): 150 - 11000	
Threading & Mounting	
RMS Mount:	
Regulatory Compliance	
Certificate of Conformance:

PRODUCT DETAILS

- Diffraction Limited Performance: Transmitted Wavefront of N14 RMS
- Streamlined Tapered Design for Added Clearance at 45° AOI
- Curved Spider Legs to Reduce Diffraction Effects
- TECHSPEC® Reflx™ Objectives Available

Our TECHSPEC® High Performance RefIX™ is built on the same design as our standard RefIX™ with the added benefits of a N4 peak-to-valley (P-V) transmitted wavefront and a tapered mechanical design, which permits use at angles of incidence (AOI) up to 45°. Manufacturing reflective objectives that achieve N4 P-V transmitted wavefront requires mirror surfaces to be highly accurate. Our precision manufacturing facilities employ a QED Q22-MRF system and QED SSI Sub-Aperture Stitching Interferometer to polish and test our mirrors to surface accuracies of better than N20 P-V.

The objectives feature an infinite conjugate design for a 200mm secondary tube lens. For broadband imaging applications, the Mtutoyo MT-L Tube lens, #56-073, is recommended. The infinite design allows for the introduction of filters and beamsplitters, making these objectives ideal for biotech and fluorescence applications as well. For focusing applications, the beam should fill the stated entrance pupil diameter of the objective. In either case, it should be noted that the light is obscured, creating an irradiance profile with less energy in the central portion of the beam.

 $\textit{M} \text{any applications that use reflective objectives require them aligned at angles of incidence up to 45°. To accommodate these steep angles, the HP ReflX^{TM} has a tapered design that provides >6mm clearance from the object incidence up to 45°. To accommodate these steep angles, the HP ReflX^{TM} has a tapered design that provides >6mm clearance from the object incidence up to 45°. To accommodate these steep angles, the HP ReflX^{TM} has a tapered design that provides >6mm clearance from the object incidence up to 45°. To accommodate these steep angles, the HP ReflX^{TM} has a tapered design that provides >6mm clearance from the object incidence up to 45°. To accommodate these steep angles, the HP ReflX^{TM} has a tapered design that provides >6mm clearance from the object incidence up to 45°. To accommodate these steep angles, the HP ReflX^{TM} has a tapered design that provides >6mm clearance from the object incidence up to 45°. To accommodate the tapered design that provides >6mm clearance from the object incidence up to 45°. The tapered design that tapered design tapered design that tapered design that tapered design tapered design that tapered design tapered de$ plane. To eliminate the diffraction effects in the image plane caused by straight-legged spider mounts, the HP ReflX® uses a curved leg design. All internal surfaces have been specially treated to eliminate straylight. Each objective is manufactured in the U.S.A, and assembled, tested, and certified on our Zygo GPI-XP interferometer. A certificate of compliance is included with each objective.

For customized versions, including laser coatings and different back tube lengths, please contact our Applications Engineering Department.
